## Senior AI Platform Engineer

✉ sscontactenquiries@gmail.com ☎ 07737127829 📍 Preston, UK 🌐 LinkedIn 🐙 GitHub 📄 Tech Blog 📁 Portfolio

### 👤 Profile

Senior AI Platform Engineer with 5+ years building resilient, secure cloud infrastructure and automated delivery pipelines across **AWS**, **Azure**, and **GCP** behind the AI applications. Experienced in **Terraform**, **Kubernetes** and **Containerisation** at scale across multi-region platforms. Expert in creating CI/CD architecture and **DevSecOps** integration which builds the layer to make **LLM** systems safe and observable to run. **AWS Bedrock** and **Azure OpenAI** guardrails, **eval harnesses** that gate CI, and the observability and cost governance around production **agent runtimes**. Built **AI applications** into regulated client environments at **NatWest**, **Barclays** and **Deutsche Bank**.

### 🧠 Skills

**Agentic & LLM Systems:** AWS Bedrock (Converse / ConverseStream), Bedrock Guardrails, Azure OpenAI, Azure AI Foundry, MCP servers, agentic tool loops, prompt caching, RAG pipelines, Azure AI Search, vector search, embeddings, prompt engineering

**Evaluation & Safety:** LLM-as-a-judge harnesses, model graders, Promptfoo, Microsoft PyRIT, OWASP LLM Top 10, adversarial prompt suites, Prompt Flow, regression gating in CI

**Observability & LLMops:** Datadog, CloudWatch, Application Insights, OpenTelemetry, TTFT and token / cache metrics, TPM and RPM quota governance, per-tenant token budgets, APIM token governance

**Cloud:** AWS: Bedrock, ECS, EKS, Lambda, API Gateway, S3, Route 53, CloudFront · | Azure: AI Foundry, Functions, APIM, Container Apps, Cosmos DB, Front Door, Entra ID, ACR, Document Intelligence · | GCP: Vertex AI, Cloud Run, Cloud Armor

**Platform & Delivery:** Terraform, Terraform Cloud, Docker, Kubernetes, Helm, GitHub Actions, Azure DevOps, GitLab CI, Checkov, TFLint

**AI Platform (LLMOps):** AWS Bedrock, Bedrock Guardrails, Azure AI Foundry, Azure OpenAI, APIM Token Governance, Quota and Rate Limit Management, Prompt Caching, LLM Evaluation Harnesses

**Languages:** Python, Ruby / Rails, SQL, Bash, JavaScript, PowerShell, Azure SDK (Python)

### 📁 Professional Experience

#### Senior AI Platform Engineer, Veracross

04/2026 – Present | UK, Remote

- Build and run a production **multi-agent LLM platform** on **AWS Bedrock** and **Ruby on Rails**, turning natural-language questions into governed SQL, dashboards and reports across three agentic AI agents.
- Built a **AWS Bedrock guardrail test suite**: 64 adversarial prompts across the **OWASP LLM Top 10**, run with **Promptfoo** and Microsoft **PyRIT** alongside CyberSOC, with every fix shipped with **Terraform**.
- Tuned **AWS Bedrock** content filters to stop **false positives** blocking legitimate user queries, and established that the prompt-attack filter is **non-deterministic across identical runs**.
- Built an **LLM-as-a-judge eval harness** with confidence-scored graders (**from Anthropic**) and per-run **HTML dashboards**, run in **CI** to catch prompt regressions before release.
- Enforced **tenant isolation** in the application layer rather than the prompt, with all agent SQL running read-only against a per-session snapshot.
- Built the platform's **observability** layer: an events and guardrail-intervention store feeding an 8-panel **Datadog** dashboard, with quota, throttling and error monitors routed to **Slack** through alarms.
- Engineered **cross-region failover** across three AWS regions with prompt-cache namespacing, and owned per-tenant **token budgets** against the regional quota ceiling.
- Built **Claude Skills** for the DevOps team to help automate their **CI/CD**, **Terraform** workflows through agents with minimal token usage.

#### Senior Cloud & AI Engineer, London Stock Exchange Group (LSEG)

09/2025 – 01/2026 | UK, Remote

- Helped design and roll out LSEG's enterprise **AI platform** on **Azure AI Foundry**, hosting LLMs and agentic workflows for **200+ projects**.
- Built and shipped an **MCP server** for a US team's agentic workflow, creating the VNet, private endpoints and container registry behind it.
- To achieve delivery, worked with teams with different time-zones across **LSEG** to resolve complex networking constraints within the platform. Liaised with **Microsoft's AI Product team** every week to discuss production support tickets. Delivered prod ahead of deadline and demoed to the **CTO** of **LSEG**.

- Automated deployment of **50+ LLMs** with **Terraform** and the **Azure Python SDK**, cutting deployment from **30 minutes to 2** through a quota-discovery and capacity-weighting pipeline.
- Ran model advisory workshops recommending the right LLM per use case, and validated agents and **RAG** components for production readiness.
- Caught unauthorised deployments, capacity drift and rate-limiting through daily **Python** cron jobs, with weekly version and expiry tracking across every deployment.
- Managed **APIM** rate limiting and **token governance** to control inference cost across engineering teams including working with Microsoft's engineering team.

**Senior DevOps Engineer, PwC**

01/2023 – 08/2025 | London, UK

- Built and shipped an **AI compliance application** for **NatWest, Barclays** and **Deutsche Bank**, taking it through five client POCs into production. Built the end to end model deployments on **Azure** powering the document comparison, summarisation and **RAG-based Q&A** with automated policy mapping.
- Designed the **Azure OpenAI** integration layer, routing queries across comparison, summarisation and retrieval over **10+ LLM deployments**.
- Built the **Python** backend on **Cosmos DB** vector storage and **Azure AI Search**, automating document ingestion through **Azure Functions** and improving indexing throughput by **50%**.
- Used **Azure Document Intelligence** for parsing and **Prompt Flow** for prompt testing and LLM response evaluation.
- Implemented **API Management** and **Application Insights** observability across **15+** Azure AI services, tracking model performance, token usage and latency.
- Deployed solutions into the client cloud on AWS and Azure, meeting Deutsche Bank's single-digit-millisecond latency requirement with **EC2 auto-scaling** and placement groups.

**DevOps Engineer, Capgemini**

02/2021 – 12/2022 | London, UK

- Built serverless and containerised applications on **AWS Lambda, API Gateway, Docker** and **Kubernetes (EKS)**, cutting operational cost by **25%**.
- Integrated **CI/CD pipelines** (Azure DevOps, Jenkins, Drone CI) with **DevSecOps** tooling (Anchore, SonarQube) to improve deployment reliability.

## Projects

**SRE Investigation AI Agent**  , *Python, AWS Bedrock AgentCore, MCP, Terraform* 08/2026 – Present

Incident investigation agent on **Bedrock AgentCore Runtime** with five tools over service metrics, logs, deploys and cost, streaming each tool call live to a chat UI. Deployed by GitHub Actions over **AWS OIDC** with no stored keys, and an 8-scenario live eval gates every deploy.

**MCP Context Inspector**  , *Python, MCP, OpenTelemetry, DynamoDB* 08/2026 – Present

**MCP server** recording per-session cost, token and tool-call metrics for Bedrock agents and Claude Code, with a Context Window Explorer showing system prompt, tool specs, reasoning and results in the order they entered context. Ingests **OTLP** telemetry behind Google OAuth.

**Azure LLM Deployment Automation**  , *Python, Azure CLI, Terraform* 12/2025 – 01/2026

Pipeline that discovers **Azure OpenAI** quota, weights capacity across instances and generates **Terraform** variables, deploying model families from YAML definitions.

**Azure GenAI Terraform Infrastructure**  , *Terraform, Azure, GitHub Actions* 04/2025 – 08/2025

Production **Terraform** for an Azure OpenAI stack: Cognitive Services, **AI Search**, **APIM**, Cosmos DB and App Insights, with TFLint and plan, apply and destroy pipelines.

**GCP Vertex AI Vector Search**  , *GCP, Terraform, Python* 07/2025

**Terraform** for Vertex AI Vector Search indexes and endpoints, with Python examples generating embeddings, querying the index and validating the deployment.

## Certificates

Terraform Associate 

Azure Fundamentals 

AWS Certified Cloud Practitioner 

## Education

**BSc Communications and Media Studies, Brunel University of London**

London
